# ELECTROMAGNETIC EMISSIONS COMPLIANCE REPORT INTENTIONAL RADIATOR CERTIFICATION TO FCC PART 15 SUBPARTC REQUIREMENT

OF

O!music powow

MODEL No.: OM955

**BRAND NAME: OZAKI** 

**FCC ID: Z46OM955** 

**REPORT NO: ES120111028F** 

**ISSUE DATE: February 13, 2012** 

Prepared for

**OZAKI Worldwide Ltd.** 8F-2, NO 6. Lane 609, Sec 5, Chung Hsin Rd., San Chung, Taipei 241, Taiwan.

*Prepared by*

| Serial Number:       | N/A   |
| File Number:         | ES120111028F  |
| Date of Test:        | January 11, 2012 to February 5, 2012                                |

### We hereby certify that:

The above equipment was tested by SHENZHEN EMTEK CO., LTD. The test data, data evaluation, test procedures, and equipment configurations shown in this report were made in accordance with the procedures given in ANSI C63.4 (2009) and the energy emitted by the sample EUT tested as described in this report is in compliance with conducted and radiated emission limits of FCC Rules Part 15.247.

The test results of this report relate only to the tested sample identified in this report.

### 1. GENERAL INFORMATION

### 1.1 Product Description

The OZAKI Worldwide Ltd.

Model: OM955(referred to as the EUT in this report) The EUT is an short range, lower power, O!music powow designed as an Device. It is designed by way of utilizing the GFSK,  $1/4 \Pi$  -DQPSK and 8DPSK modulation achieves the system operating.

A major technical descriptions of EUT is described as following:

- A). Operation Frequency: 2402-2480MHz
- B). Modulation: GFSK, 1/4 ∏-DQPSK, 8DPSK
- C). Number of Channel: 79 D). Channel space: 1MHz
- E). RF Output Power: -2.77 dBm
- F). BIT Rate of Transmission: 1Mbps, 2Mbps, 3Mbps
- G). Antenna Type: PCB antenna H). Antenna GAIN: 2.3dBi
- I). Power Supply: DC 5V from USB Port and 3.7V Polymer Lithium Battery

### 1.2 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: Z46OM955 filing to comply with Section 15.247 of the FCC Part 15 Subpart C Rules.

#### 1.3 Test Methodology

Both conducted and radiated testing were performed according to the procedures in ANSI C63.4 (2009) and FCC Public Notice DA 00-705. Radiated testing was performed at an antenna to EUT distance 3 meters.

### 1.4 Special Accessories

Not available for this EUT intended for grant.

### 1.5 Equipment Modifications

Not available for this EUT intended for grant.

# 1.6 Test Facility

Site Description EMC Lab.

Accredited by CNAS, 2010.10.29

The certificate is valid until 2013.10.28

The Laboratory has been assessed and proved to be in compliance

with CNAS/CL01:2006(identical to ISO/IEC17025: 2005)

The Certificate Registration Number is L2291

Accredited by TUV Rheinland Shenzhen 2010.5.25

The Laboratory has been assessed according to the requirements

ISO/IEC 17025

Accredited by FCC, October 28, 2010

The Certificate Registration Number is 406365.

Accredited by Industry Canada, March 5, 2010 The Certificate Registration Number is 46405-4480.

Name of Firm : SHENZHEN EMTEK CO., LTD Site Location : Bldg 69, Majialong Industry Zone,

Nanshan District, Shenzhen, Guangdong, China

### 2. System Test Configuration

### 2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

#### 2.2 EUT Exercise

The Transmitter was operated in the normal operating mode. The Tx frequency was fixed which was for the purpose of the measurements.

#### 2.3 Test Procedure

#### 2.3.1 Conducted Emissions

The EUT is a placed on as turn table which is 0.8 m above ground plane. According to the requirements in Section 13.1.4.1 of ANSI C63.4-2009 Conducted emissions from the EUT measured in the **frequency range between 0.15 MHz and 30MHz** using **CISPR Quasi-Peak and average detector mode**.

#### 2.3.2 Radiated Emissions

The EUT is a placed on as turn table which is 0.8 m above ground plane. The turn table shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter(EUT) was rotated through three orthogonal axes according to the requirements in Section 13.1.4.1 of ANSI C63.4-2009.

#### 2.4 Limitation

### (1) Channel Separation test

FCC Part 15, Subpart C Section 15.247(a)(1) Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25kHz or the 20 Bandwidth of the hopping channel, whichever is greater.

| Frequency Range (MHz) | Limit(kHz) |
|-----------------------|------------|
| 902-928               | >25kHz     |
| 2400-2483.5           | >25kHz     |
| 5725-5850             | >25kHz     |

| <b>(2)</b> |            | 20dB Bandw                         | idth     |      |       |           |
|------------|------------|------------------------------------|----------|------|-------|-----------|
|            | Frequency  | Liı                                | mit(kHz) |      |       |           |
|            | Range(MHz) | <b>Quantity of Hopping Channel</b> | 50       | 25   | 15    | <b>75</b> |
|            |            | 902-928                            | < 250    | >250 | NA    | NA        |
|            |            | 2400-2483.5                        | NA       | NA   | >1000 | <1000     |

# (3) Quantity of Hopping Channel

FCC Part 15, Subpart C Section 15.247

|             | Limit(Quantity of Hopping Channel) |             |             |             |  |
|-------------|------------------------------------|-------------|-------------|-------------|--|
| Frequency   | <b>20dB</b>                        | <b>20dB</b> | <b>20dB</b> | <b>20dB</b> |  |
| Range (MHz) | bandwidth                          | bandwidth   | bandwidth   | bandwidth   |  |
|             | <250kHz                            | >250kHz     | <1MHz       | >1MHz       |  |
| 902-928     | 50                                 | 25          | NA          | NA          |  |
| 2400-2483.5 | NA                                 | NA          | 75          | 15          |  |
| 5725-5850   | NA                                 | NA          | 75          | NA          |  |

# (4) Time of Occupancy(Dwell Time)

FCC Part 15, Subpart C Section 15.247

| Engaranari Danga       |                | LIMIT(rms)                        |                                 |
|------------------------|----------------|-----------------------------------|---------------------------------|
| Frequency Range (MHz)  | 20aB banawlath | 20dB bandwidth >250kHz(25Channel) | 20dB bandwidth <1MHz(75Channel) |

| 5725-5850              | NA             | NA                                | 400(30S)                        |
| 3.7 · CO1 // () 441 1: |                |                                   |                                 |

**Note:** The "()" is all channel's average time of occupancy.

# (5) Maximum Peak Output Power

FCC Part 15, Subpart C Section 15.247

|   |          | LIMIT(W)     |              |          |
|---|----------|--------------|--------------|----------|
| Frequency Quantity of<br>Range (MHz) Hopping<br>Channel | 50       | 25           | 15           | 75       |
| 902-928   | 1(30dBm) | 0.125(21dBm) | NA           | NA       |
| 2400-2483.5   | NA       | NA           | 0.125(21dBm) | 1(30dBm) |
| 5725-5850   | NA       | NA           | NA           | 1(30dBm) |

### (6) Band edge

FCC Part15, Subpart C Section 15.247, In any 100kHz bandwidth outside the frequency band in with the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, attenuation below the general limits specified in section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in section 15.205(a), must also comply with the radiated emission limits specified in section 15.209(a).

| Operating               | Courieus emissien           | Limit                              |                        |  |
|-------------------------|-----------------------------|------------------------------------|------------------------|--|
| Frequency<br>Range(MHz) | Spurious emission frequency | Peak power ration to emission(dBc) | Emission level(dBuV/m) |  |

|                         | >5850                       | >20                                | NA                     |  |

#### (7) Conducted Emission

| Frequency(MHz) | Quasi-peak | Average |
|----------------|------------|---------|
| 0.15-0.5       | 66-56      | 56-46   |
| 0.5-5.0        | 56         | 46      |
| 5.0-30.0       | 60         | 50      |

#### Note

- 1. The lower limit shall apply at the transition frequencies
- 2. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50 MHz.

# (8) Radiated Emission

FCC Part 15, Subpart C Section 15.209 limit of radiated emission for frequency below 1000GHz. The emissions from an intentional radiator shall not exceed the field strength level specified in the following table:

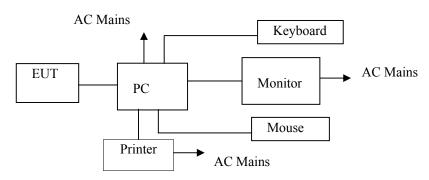

| Frequency<br>(MHz) | Field strength<br>µV/m | Distance(m) | Field strength at 3m dBµV/m |
|--------------------|------------------------|-------------|-----------------------------|
| 0.009~0.490        | 2400/F(KHz)            | 300         | See the remark              |
| 0.490~1.705        | 2400/F(KHz)            | 30          |                             |
| 1.705~30.0         | 30                     | 30          |                             |
| 30-88              | 100                    | 3           | 40                          |
| 88-216             | 150                    | 3           | 43.5                        |
| 216-960            | 200                    | 3           | 46                          |
| Above 960          | 500                    | 3           | 54                          |

Remark: 1. Emission level in dBuV/m=20 log (uV/m)

- 2. Measurement was performed at an antenna to the closed point of EUT distance of meters.
- 3. Distance extrapolation factor =40log(Specific distance/ test distance)( dB); Limit line=Specific limits(dBuV) + distance extrapolation factor.

#### Note:

(1) Unless otherwise denoted as EUT in [Remark] column, device(s) used in tested system is a support equipment.

### 2.7 Description of test modes

The EUT (O!music powow) has been tested under normal operating condition.

This EUT is a FHSS system. Pre-scanned tests, X, Y, Z in the three orthogonal panels, were conducted to determine the final configuration from all possible combinations. We use blue test to control the EUT, Let EUT hopping on and transmit with highest power, and the worst result was reported with modulation GFSK. 79 Channels are provided by EUT. The 3 channels of lower, medium and higher were chosen for test.

| Channel | Frequency(MHz) |
|---------|----------------|
| 1       | 2402           |
| 40      | 2441           |
| 79      | 2480           |

# **3. Summary of Test Results**

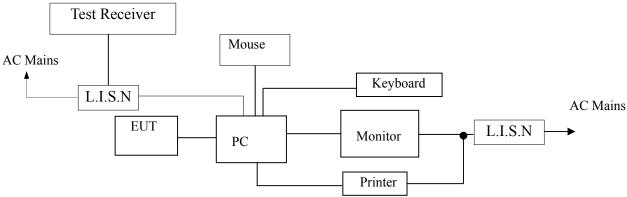

| FCC Rule         | Description Of Test            | Result    |
|------------------|--------------------------------|-----------|
| 15.247(a)(1)     | Channel Separation test        | Compliant |
| 15.247(a)(1)     | 20dB Bandwidth                 | Compliant |
| 15.247(a)(1)     | Quantity of Hopping Channel    | Compliant |
| 15.247(a)(1)     | Time of Occupancy (Dwell Time) | Compliant |
| 15.247(b)(1)     | Max Peak output Power test     | Compliant |
| 15.247(d)        | Band edge test                 | Compliant |
| 15.207           | AC Power Conducted Emission    | Compliant |
| 15.247(d)        | Radiated Emission              | Compliant |
| §15.247(d)       | Antenna Port Emission          | Compliant |
| 15.203&15.247(b) | Antenna Application Complia    |           |

### 4. Conducted Emissions Test

#### **4.1 Measurement Procedure:**

- 1. The EUT was placed on a table which is 0.8m above ground plane.
- 2. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 3. Repeat above procedures until all frequency measured were complete.

### **4.6 Conducted Measurement Photos:**

### 5. Radiated Emission Test

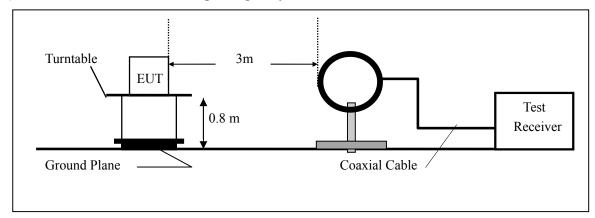

### **5.1** Measurement Procedure

- 1. The EUT was placed on a turn table which is 0.8m above ground plane.
- 2. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measured was complete.

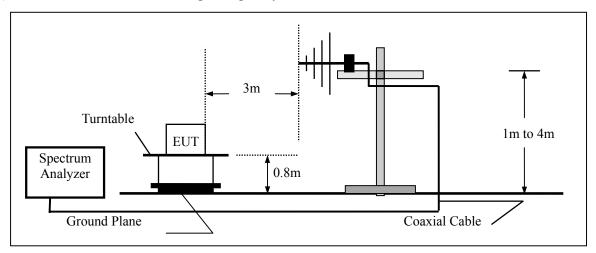

When spectrum scanned from 30 MHz to 1GHz setting resolution bandwidth 100 kHz and video bandwidth 300kHz. And spectrum scanned above 1GHz setting resolution bandwidth 1MHz, video bandwidth 3MHz.

### **5.2** Test SET-UP (Block Diagram of Configuration)

**Note:** (1) All Readings are Peak Value and AV.

- (2) Emission Level= Reading Level+Probe Factor +Cable Loss
- (3) Data of measurement within this frequency range shown "--" in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.
- (4) All the x/y/z orientation has been investigated, and only worst case is presented in this report.

### **5.5 Radiated Measurement Photos:**

### 6. Channel Separation test

#### **6.1** Measurement Procedure

The EUT was operating in hopping mode or could be controlled its channel. Printed out the test result from the spectrum by hard copy function.

### **6.2** Test SET-UP (Block Diagram of Configuration)

| EUT | EMI Test Re | ceiver |
|-----|-------------|--------|
|-----|-------------|--------|

### **6.3** Measurement Equipment Used:

| EQUIPMENT         | MFR             | MODEL  | SERIAL       | LAST       | CAL DUE.   |
|-------------------|-----------------|--------|--------------|------------|------------|
| TYPE              |                 | NUMBER | NUMBER       | CAL.       |            |
| EMI Test Receiver | Rohde & Schwarz | ESU    | 1302.6005.26 | 05/29/2011 | 05/29/2012 |

#### **6.4** Measurement Results:

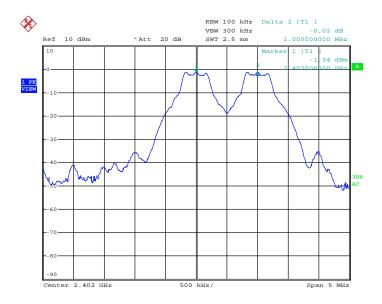

All the modulation modes were tested and the data of the GFSK mode are recorded in the following pages.

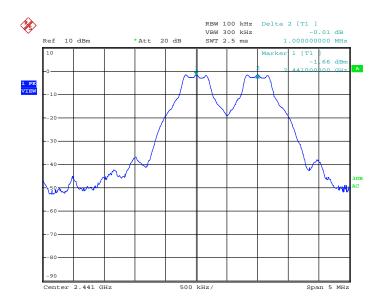

Refer to attached data chart.

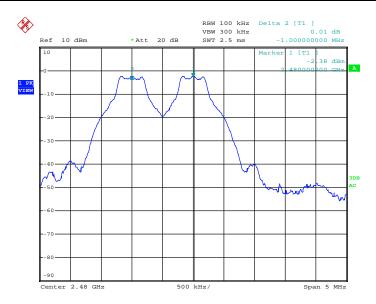

Spectrum Detector:PKTest Date :01/14/2012Test By:AndyTemperature : $28 \, ^{\circ}\mathbb{C}$ Test Result:PASSHumidity : $65 \, ^{\circ}\mathbb{M}$ 

| Channel number | Channel frequency | Separation Read | Separation Limit      |
|----------------|-------------------|-----------------|-----------------------|
|                | (MHz)             | Value (kHz)     | 2/3 20dB Down BW(kHz) |
| 1              | 2402              | 1000            | >747.86 kHz           |
| 40             | 2441              | 1000            | >737.17 kHz           |
| 79             | 2480              | 1000            | >737.18 kHz           |

NOTE: For two-third of the 20dB bandwidth (page 29) is greater than 25kHz. So the limit of Separation Limit is just as the above table.

### 7. Bandwidth test

### 7.1 Measurement Procedure

The EUT was operating in hopping mode or could be controlled its channel. Printed out the test result from the spectrum by hard copy function.

All the modulation modes were tested and the data of the GFSK mode are recorded in the following page.

| Hopping Channel<br>Frequency Range | Quantity of Hopping Channel | Quantity of Hopping Channel limit |
|------------------------------------|-----------------------------|-----------------------------------|
| 2402-2480                          | 79                          | >15                               |

### 9. Time of Occupancy (Dwell Time) test

#### 9.1 Measurement Procedure

- a. Check the calibration of the measuring instrument(SA) using either an internal calibrator or a known signal from an external generator.
- b. Turn on the EUT and connect its antenna terminal to measurement via a low loss cable. Then set it to any one measured frequency within its operating range and make sure the instrument is operated in its linear range.
- c. Adjust the center frequency of SA on any frequency be measured and set SA to zero span mode. And then, set RBW and VBW of spectrum analyzer to proper value.
- d. Measure the time duration of one transmission on the measured frequency. And then plot the result with time difference of this time duration.
- e. Repeat above procedures until all different time-slot modes have been completed.

### 10. MAX IMUM PEAK OUTPUT POWER TEST

#### **10.1 Measurement Procedure**

- a. Check the calibration of the measuring instrument(SA) using either an internal calibrator or a known signal from an external generator.
- b. Turn on the EUT and connect it to measurement instrument. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
- c. The center frequency of the spectrum analyzer is set to the fundamental frequency and using proper RBW and VBW setting.
- d. Measure the captured power within the band and recording the plot.
- e. Repeat above procedures until all frequencies required were complete.

### 11. Band EDGE test

#### 11.1 Measurement Procedure

- 1. The EUT was Operating in hopping mode or could be controlled its channel. Printed out test result from the spectrum by hard copy function.
- 2. The EUT was placed on a turn table which is 0.8m above ground plane.
- 3. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 4. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 5. Repeat above procedures until all frequency measured were complete.

### 11.2 Test SET-UP (Block Diagram of Configuration)

As 5.2 Test set up (B) and (C)

### 11.3 Measurement Equipment Used:

Same as 5.3 Radiated Emission Measurement.

#### 11.4 Measurement Results:

### 12.2 Measuring Instruments and setting

The following table is the setting of spectrum analyzer.

| EMI Test Receiver | Setting  |
|-------------------|----------|
| Attenuation       | Auto     |
| RB                | 100kHz   |
| VB                | 300kHz   |
| Detector          | Peak     |
| Trace             | Max hold |

### **12.3 Test Procedures**

The conducted spurious emissions were measured conducted using a spectrum analyzer at low, mid, and hi channels, The limit was determined by attenuation 20dB of the RF peak power output.

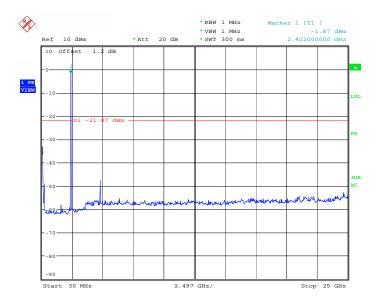

### 12.4 Block Diagram of Test setup

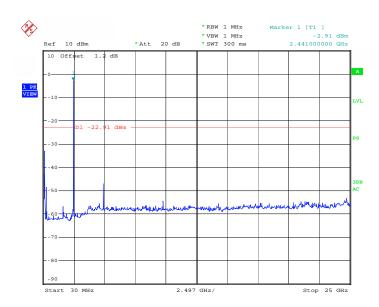

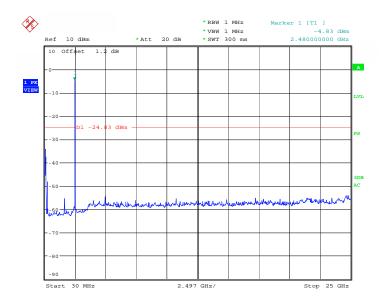

### 12.5 Test Result

PASS.

All the modulation modes were tested and the data of the GFSK mode are recorded in the following pages.

# 13. Antenna Application

### 13.1 Antenna requirement

The EUT'S antenna is met the requirement of FCC part 15C section 15.203 and 15.247

### FCC part 15C section 15.247 requirements:

Systems operating in the 2402-2480MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum peak output power of the intentional radiator is reduced by 1dB for every 3dB that the directional gain of the antenna exceeds 6dBi.

### **13.2 Result**

The EUT's antenna integrated on PCB, The antenna's gain is 2.3dBi and meets the requirement.
